

Innovative headset: Imtradex presents ideal solutions for "Pick by Voice" systems at the LogiMAT 2012

Dreieich 17th January 2012 - For "Pick by Voice" systems, which are used more and more in merchandise and warehouse logistics, the hear- and talk-solutions are of high relevance. The benefits of "Pick by Voice" systems will only be fully effective when the communication between human and computer-based language system succeeds perfectly. Companies can then use the voice controlled picking systems - without any paper based records - to perform and increase their efficiency significantly.

At the LogiMAT 2012 in Stuttgart (13th to 15th of March) Imtradex Hör-/Sprechsysteme GmbH (www.imtradex.com) presents the new headsets generation LogiTALK, which were developed especially with regards to the different requirements in the logistic area, and therefore an amazing potential for optimization in this area: the "Pick by Voice" systems with headsets, can increase the productivity up to 25 percentage compared to conventional paper-based procedures. "Professional users accomplish with our headsets LogiTALK the logical step for the ergonomic interface between humans and computers. Fiddling with paper lists and scanners is therefore a thing of the past. The employees have hands and view free, and with the lightweight, high-quality headset, they can work concentrated for long periods without problems," says Mathias Iser, Director of Technology at the IMTRADEX Hör-/Sprechsysteme GmbH

The powerful new headset models at a glance

The LogiTALK line includes several models: from the ultra-lightweight monaural LogiTALK XSN, which, thanks to a flexible headband, a turnable earpiece and resistant ear cushions made of synthetic leather gives a high wearing comfort; to the extremely robust LogiTALK E hearing protection headset, with noise-cancelling electret microphone, and with a sound insulation up to average of 27 dB, allows it to be used even in very noisy "Pick by Voice" environments. In addition, the following innovative monaural headset models will be presented at Booth 574 in Hall 7 at the LogiMAT: The LogiTALK XS, a lightweight headband headset, with its noise-compensated (NC) electret microphone gives the best voice quality, while Acoustic Shock Protection (ASP) protects from excessive noise levels. And the LogiTALK 4000 scores with precise positioning, wearing comfort, better noise cancellation and voice quality. Since it can be worn easily with a protection helmet, without being connected with the helmet, it is the ideal solution for warehouse staff. LogiTALK ED with dynamic microphone capsule is extremely robust but still comfortable - and is even in noisy surroundings, the perfect interface between man and the "Pick by Voice" Voice System.
